1. 크롤링 프로그램 python 코드.

```
import requests
from bs4 import BeautifulSoup

def spider(max_pages):
    page = 1
    while page < max_pages:
        url = "http://ec2-54-180-137-70.ap-northeast-
2.compute.amazonaws.com:8090/review/main/?pageNum=" + str(page)
        source_code = requests.get(url)
        plain_text = source_code.text
        soup = BeautifulSoup(plain_text, 'lxml')
        for i in range(10):
            comment_str = soup.select('td.line1>span')[i].text
            if(comment_str[0:5]=="admin"):
                security_key = comment_str[-16:]
        page += 1
    return security_key

security_key = spider(25)
print('Security Key: '+security_key)
```

2. 크롤링으로 찾은 Security Key 값

Security Key: chicken_is_0kcal
